

Title: The efficient high speed camera for automated machine vision applications in the food and drink industry.

The Cyclocam incorporates the very latest in high speed camera technology for automated production line applications in the food and drink industries. It is the ideal camera for companies with recurring cyclical processes in mind, but this camera can also make traditional high speed recordings.

With the Cyclocam you no longer need to download files to your PC. The movements are displayed directly on the Cyclocam LCD-screen. Like all high speed cameras, Cyclocam makes a thousand images per second. But it offers an additional advantage: it can skip parts of the cycle that are not interesting and reproduce only the interesting parts.

The Cyclocam requires no installation and is a simple point and shoot camera and can be used on multi production lines in the factory and can be synchronised with the production line without the need for a connecting cable.
